REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Claims 9 and 17 are allowable because while the immobilization of sulfur-containing molecules was generally known in the prior art, see e.g.-Hill et al, and the annealing of electroplated gold was generally known in the prior art, see e.g.-Glezen et al and Lechtzin, there is no motivation to combine the annealing step into a process that also includes immobilizing a large number of sulfur-containing molecules on the gold surface. The annealing step of both Glezen et al and Lechtzin is for the purpose of stress relieving, however, there is no need for stress relief in the gold plated layer in the gene detection device of Hill et al. Claims 1 and 10 are allowable because the prior art does not teach or suggest the amended claim feature that the gold-plated body is obtained by using electrically conductive substrates having a Ni layer on the periphery of electrically conductive materials composed of Co-Ni-Fe alloy. Glezen et al teach metals, diamond, semiconductors, ceramics, thermoplastics or thermosets as the substrate, but there is no suggestion of having a Ni layer on a Co-Ni-Fe alloy substrate. Lechtzin teaches using wax as the substrate, nor does it suggest forming a Ni layer on the periphery thereof.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
